

## **Comments on the Title V Permit**

### **Fact Sheet**

- **Background Section, Paragraph 1**  
Title V permits are required for all incinerators that are regulated under Subpart EEE not because the facility emits large amounts of pollution. Also the permit regulates emissions specified by regulation not the amount of pollution the facility can emit.
- **Background Section, Paragraph 2**  
This paragraph is not relevant to this renewal permit so why have this paragraph in the Fact Sheet.
- **Burning Hazardous Waste, Paragraph 4**  
Modify second sentence to read "Carbon adsorption units are attached to each tank to help control emissions." Delete "gases occasionally escape from the tanks."
- **Burning Hazardous Waste, Paragraph 5**  
Modify to state "is maintained at negative pressure to minimize emissions" instead of "is maintained at negative pressure so emissions don't escape."
- **Burning Hazardous Waste, Paragraph 5**  
Reword last sentence to read "Before some containerized waste is incinerated it is packaged into more manageable containers."
- **Burning Hazardous Waste, Paragraph 7**  
Last Line. Should state "baghouses" not a "baghouse" and delete "which help control air pollution."
- **Burning Hazardous Waste, Paragraph 8**  
First sentence, delete "to further help control air pollution."
- **Burning Hazardous Waste, Paragraph 9**  
Second sentence, delete "as lime is an important material in this air pollution control technology."
